

## python\_Log模块使用

```
import logging
logger = logging.getLogger() //获取logger对象
#set loghandler
file = logging.FileHandler("info.log") //设置该logger的输出文件
logger.addHandler(file)
#set formater
#formatter = logging.Formatter("%(asctime)s %(levelname)s %(message)s")
formatter = logging.Formatter("%(asctime)s %(levelname)s %(message)s") //设置该logger的输出文件格式
file.setFormatter(formatter)
#set log level
logger.setLevel(logging.NOTSET) //设置logger的过滤设置
logger.info("asdasdasdfsdfsdfsdf")//将内容输出到logger中
```
